**NEXT
PRESENTATION:**

**WORLD CUP
TOURNAMENT
VIENNA 2011**

From Sep. 26th to
Oct. 2nd 2011

„MWEBSPORT is a revolutionary idea for the billiard sport, friends of billiards all over the world will come closer together. MWEBSPORT will make our sport even more popular.“

Filippos Kasidokostas
World Champion

„MWEBSPORT can open new horizons in the billiard sport – serving the sport and an innovative entertainment.“

Marco Zanetti
Two-Times World Champion

Playing Billiards Without Limits – The MWEBSPORT-Software

The MWEBSPORT technology makes it possible to get in contact with any player – no matter where in the world he is – and play against him or to train with him. After the end of the run the camera stores the position of the balls and transfers it to the system within fractions of a second. The system then transfers the data to the computer of the opponent. The opponent (training partner) positions the balls using the laser and plays.

MWEBSPORT – Revolutionary New Possibilities

→ Replay games

Each match – also within a club – can be recorded and saved. That way tricky patterns can easily be reconstructed afterwards and you can try again.

→ Discuss tricky patterns

Very difficult patterns can be stored in the system at the push of a button – this way the whole billiard community can try to find a solution.

→ Contact world-class players

Of course it is also possible to get the opinion of the crème de la crème of the billiard world when it comes to difficult patterns: How would Marco Zanetti & co play these balls?

→ Organize tournaments

Tournaments are not longer limited to one place with MWEBSPORT. You can virtually meet on the internet, but play real billiards against each other. Also position-tournaments are easily possible. Registered MWEBSPORT clubs themselves can organize (world-wide) tournaments and thus increase their budget.

→ Training

Here MWEBSPORT opens up new possibilities. There are already more than 1500 positions stored in the database - including a short description and the solution. They can easily be projected onto the billiard table using the laser.

→ Play against the world-class

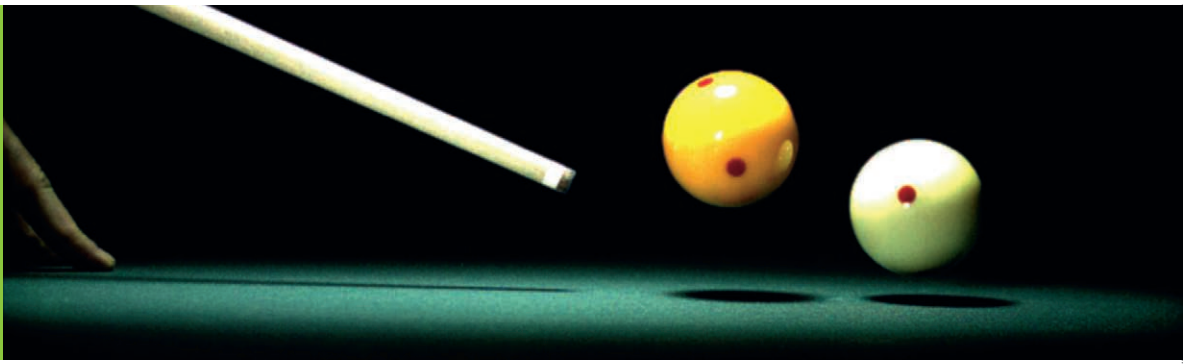

Via MWEBSPORT you can book top players – so you can compete with the world-class.

→ Book trainers

Many top players are also trainers, they can easily be booked via MWEBSPORT. But players and trainers do not have to be at the same place anymore. Travel costs and stress can be saved. Trainer and player can train others from their homes and thus have the possibility to have an additional income.

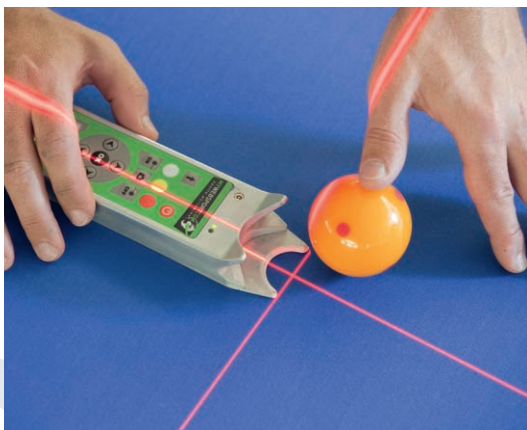

→ Simultaneous training

Top players or trainers will hold regular simultaneous trainings. Several patterns and solutions will be explained and demonstrated – logged-in MWEBSPORT members can watch the training and try the shots immediately.

Playing Billiards without Borders – the MWEBSPORT Hardware

The complete MWEBSPORT-system consists of a stainless steel box in which the special camera and the precision laser are positioned. The system is controlled by the computer which is part of the package. It can easily be operated by using the touch screen and multi-functional remote control. The complete system is delivered including a webcam, a headset with microphone, a big flat TV and mountings.

MWEBSPORT COMPONENTS

→ Stainless Steel Box

The compact box of stainless steel which is installed directly above the table contains the high-resolution special camera and the precision laser. They are controlled by the computer and project the positions of the balls on the billiard table exactly to the millimeter.

→ Terminal

Computer and screen are also contained in a high quality stainless steel box. All functions can be controlled very easily using a touch screen.

→ Remote Control

The multi-purpose remote control is the center piece of the MWEBSPORT technology. You can use it to execute all steps: releasing the camera, activation of the laser, transmission to the computer, navigation on the touch screen, ... also the positioning of the balls is possible exactly to the millimeter using the remote control. The integrated stencil can be used to adjust to the laser cross.

→ Webcam and Flat-TV

The webcam, a big flat-TV and the internet make it possible to watch each other in real time – the players are facing each other (almost) eye to eye.

→ Headset

Using the wireless headset the players can communicate with each other or with the trainer in real time.
